```r
dat <- as.data.table(readRDS(file.path(base_dir, dat_path, paste0(base_nm, '_tmp'), 'coverage.rds')))
```

Coverage

```r
tmp <- dat[, .(lower = boot:::perc.ci(boot_reps)[4], upper = boot:::perc.ci(boot_reps)[5]),
           by = c('subset_num', 'replication', 'n')][
              ,.(lower = mean(lower), upper = mean(upper)), by = c('replication', 'n')
           ]
tmp[, .(coverage = mean(lower <= te & upper >= te)), by = c('n')]
```

```
##          n coverage
## 1: 1e+04    0.852
## 2: 2e+04    0.858
## 3: 5e+04    0.874
## 4: 1e+05    0.862
```
